# EUCALYPTUS MONITOR PROGRAM

Standards Council of Canada  
Accredited Laboratory  
Scope of Accreditation 262

Conseil canadien des normes  
Laboratoire accrédité  
Portée d'accréditation 262 <sup>TM</sup>

All our physical testing and quality assurance services are ISO 17025-accredited by the Standards Council of Canada. As such they comply with our clients' ISO 9000 quality assurance requirements.

Paprican is pleased to offer a new interlaboratory monitor program based on bleached kraft Eucalyptus pulp.

This program will operate in a similar manner as our existing bleached pulp monitor program which currently alternates between Eastern Canadian softwood and hardwood bleached kraft pulp. The new Eucalyptus monitor program will also be provided three times a year, and data will include fiber length and coarseness, as well as Canadian Standard Freeness, caliper, burst, tear, and tensile at various PFI beating levels.

All our monitor programs are an integral part of the quality assurance of participating laboratories. Paprican's own results are included for reference. Mills use our programs to ensure the validity and reliability of their test results and to establish stronger credibility with their customers.

If you would like to participate in this program, or for more information about our other monitor programs, please contact Pierre Simon.
